

This assignment does not count toward the final grade.

Exercises (ungraded)

- Due No Due Date
- Points None

Instructions

1. Create a new package called people.
2. Create a Person class within package people.
3. Add data fields for the person's name (a String), address (a String), and yearOfBirth (an integer).
4. Add constructors.
5. Add getters and setters.
6. Add a no-parameter method canVote that returns a boolean indicating whether the person can vote (is at least 18 years old). You may assume the current year is 2024, but as an extra challenge, find the current year using java.util.Calendar from the Java API.
7. Create a second class in the same package called TestPeople consisting only of a main method that tests the features of your Person class.
